

# COLOCATION : Leeds City Switch

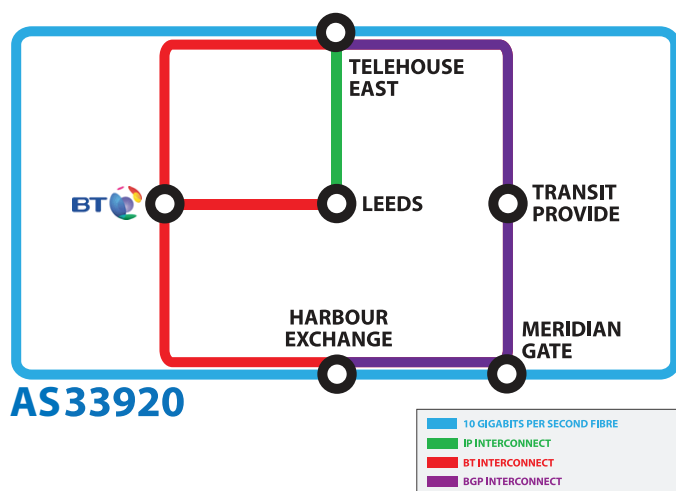

**Do any of your applications rely on a single piece of hardware ?**  
**How quickly could you recover from a hardware failure ?**  
**Do you have enough spare hardware to cover a disaster scenario ?**

A business continuity plan and disaster recovery solutions are essential chapters of an information security management system and are required in order to secure ISO 27001 accreditation.

If you're an aql colocation client with equipment in Telehouse East, Telehouse North, Harbour Exchange or Meridian Gate, aql can offer colocation in our Leeds City Switch facility.

The facility is ideal for housing backup equipment for disaster recovery/backup purposes.

The aql network has been extended to Leeds such that it is possible to provide IP addresses on the same numbering and subnets as provided at our London sites, allowing failover to the Leeds facility.

The network diagram above shows that there is a fibre IP link from Leeds to London, allowing spare equipment to reside on the London aql network, but with the geographic and physical redundancy afforded by an out of London location.

## Specifications

- ▶ Convenient city centre location
- ▶ Diesel generator
  - up to 13 hours runtime
  - contract for running refill
